Holdridge classified climates  
based on the biological effects of  
temperature and rainfall on

vegetation under the assumption  
that these two abiotic factors are  
the largest determinants of the  
types of vegetation found in a  
habitat. Holdridge uses the four  
axes to define 30 so-called  
"humidity provinces", which are  
clearly visible in his diagram.

ITOPF - Introduction A pandemic  
is a global disease outbreak. An  
influenza pandemic occurs when  
a new influenza virus emerges for  
which there is little or no  
immunity in the human  
population, begins to cause  
serious illness and then spreads  
easily person-to-person  
worldwide. Wed, 23 May 2018
